BELLOW SEAL GLOBE VALVE

The safe way, checking and assessing your steam system, control equipment and production process at work. Look at, identify and document the performance in real time.

## WHY?

**Faulty steam traps are the common cause of intermittent production process problems, through condensate back up, creating excessive greenhouse gas emission and reducing the service life of costly control valves.**

## REDUCE & SAVE!

- Energy intake
- Lost production time
- Operation and maintenance cost
- Carbon emission

## HOW?

At STEAM LINK we developed the advanced steam trap function test. The system is based on a pre-set inspection cycle with the advanced 'FLIR' infrared technology; this allows us to create a cost effective steam trap / system data base. Our system can be adjusted to identify and record the cause of the steam trap failure.
