

STEAM INJECTORS DN 1" - 1 1/2"

DESCRIPTION

The SI series steam injectors from ADCA are injection condensers. They ensure low noise and vibration and rapid heating of still or flowing fluids in basins and vessels due to direct steam injection. Steam enters through the inlet housing, passes along the center of the heater, mixing with the cool water which is drawn in through radial holes.

Connections are female screwed.

* With the vessel at atmospheric pressure.

Example : We require to inject 3500 Kg/hr of steam with a pressure of 8 bar. From the injector capacity table we see that at 8 bar the injector SI 140 will pass 1625 Kg/hr and 3500 divided by 1625=2,15.

Two injectors will barely cope, so, we recommend installing three injectors, which will meet the demand.
